

LEARN, COLLABORATE,
NETWORK, AND
PUBLISH IN A DIGITAL
HEALTH CANADA
COMMUNITY OF
ACTION

“Digital Health Canada facilitates volunteering in a structured way, allowing individuals to grab hold of leadership opportunities with a certain amount of ease in a variety of settings.”

– SUSAN ANDERSON,
ORION HEALTH

A Community of Action brings like-minded Digital Health Canada members together to produce a deliverable on any HI or digital health topic in which they share an interest

Communities of Action are central to the Digital Health Canada mission to provide opportunities for connection and idea-sharing and to support members through professional development.

Volunteering with a Community of Action is an excellent way to grow your network, improve your resume, and learn something new. Current Communities of Action include:

Academic

Conducting a complete analysis of Canadian Health Informatics and digital health programs and curricula.

Governance Standards

Discussing and researching governance in the context of Electronic Health Record Systems.

eSafety

Fostering the accelerated adoption of safer eHealth solutions and health software.

Health Analytics

How is health analytics viewed in Canada? How do people enter the field, and what is their educational background?

Home and Community Care

What is the status across provinces and is there a common vision and opportunity?

Virtual Care

Exploring virtual care terminology and building a nomenclature for telehealth services.

Communities of Action fulfill the Digital Health Canada mission to foster network growth and connection and bring together ideas from multiple segments for incubation and advocacy

Work with a purpose

Communities of Action (CoAs) come together with a shared purpose: to learn more about a specific health informatics, information technology, or digital health topic that may enhance the quality of healthcare for Canadians. CoAs meet (virtually), learn, collaborate, and share their knowledge with the Canadian digital health community through reports, white papers, guidelines, or presentations.

Contribute to the knowledge pool

The work of every Digital Health Canada Community of Action is invaluable, and adds to the pool of health informatics or digital health knowledge. Past Community of Action publications include guidelines for e-safety and privacy; reports on telehealth and the state of health informatics education in Canada; and whitepapers on EHR governance and remote patient monitoring. Browse and download reports and whitepapers at digitalhealthcanada.com (publications are free for Digital Health Canada members).
