Canada has experienced progress in its digital health evolution ...but more work is needed

CIHI and Infoway are partnering to modernize health information flows and create a connected health system

1

Health data content foundation:

Defines the underlying data content and data structure on a pan-Canadian basis to be exchanged.

2

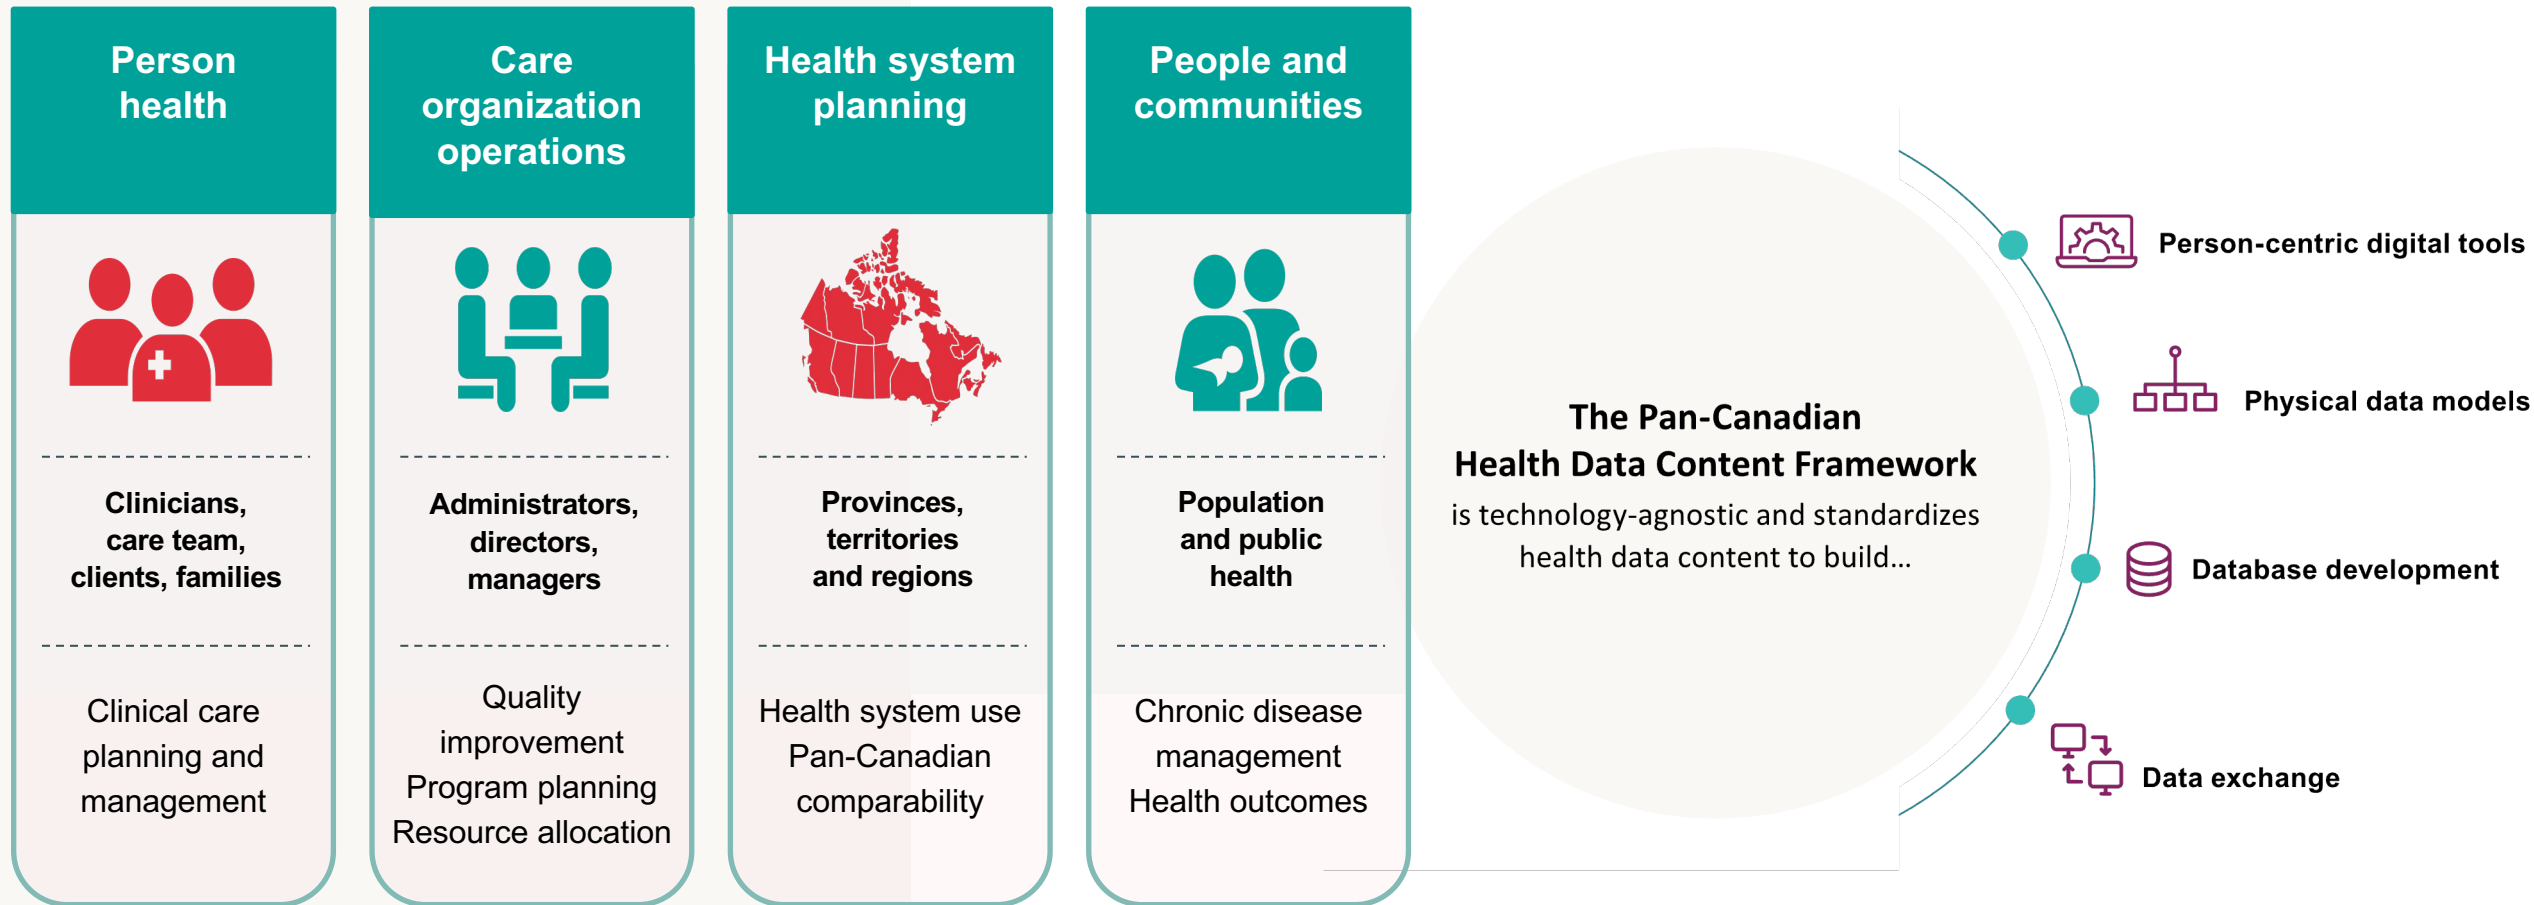

Data exchange:

Builds technical exchange standards to move discrete data points in response to specific use cases.

Without data standardization at the point of capture, the information exchanged will not be meaningful

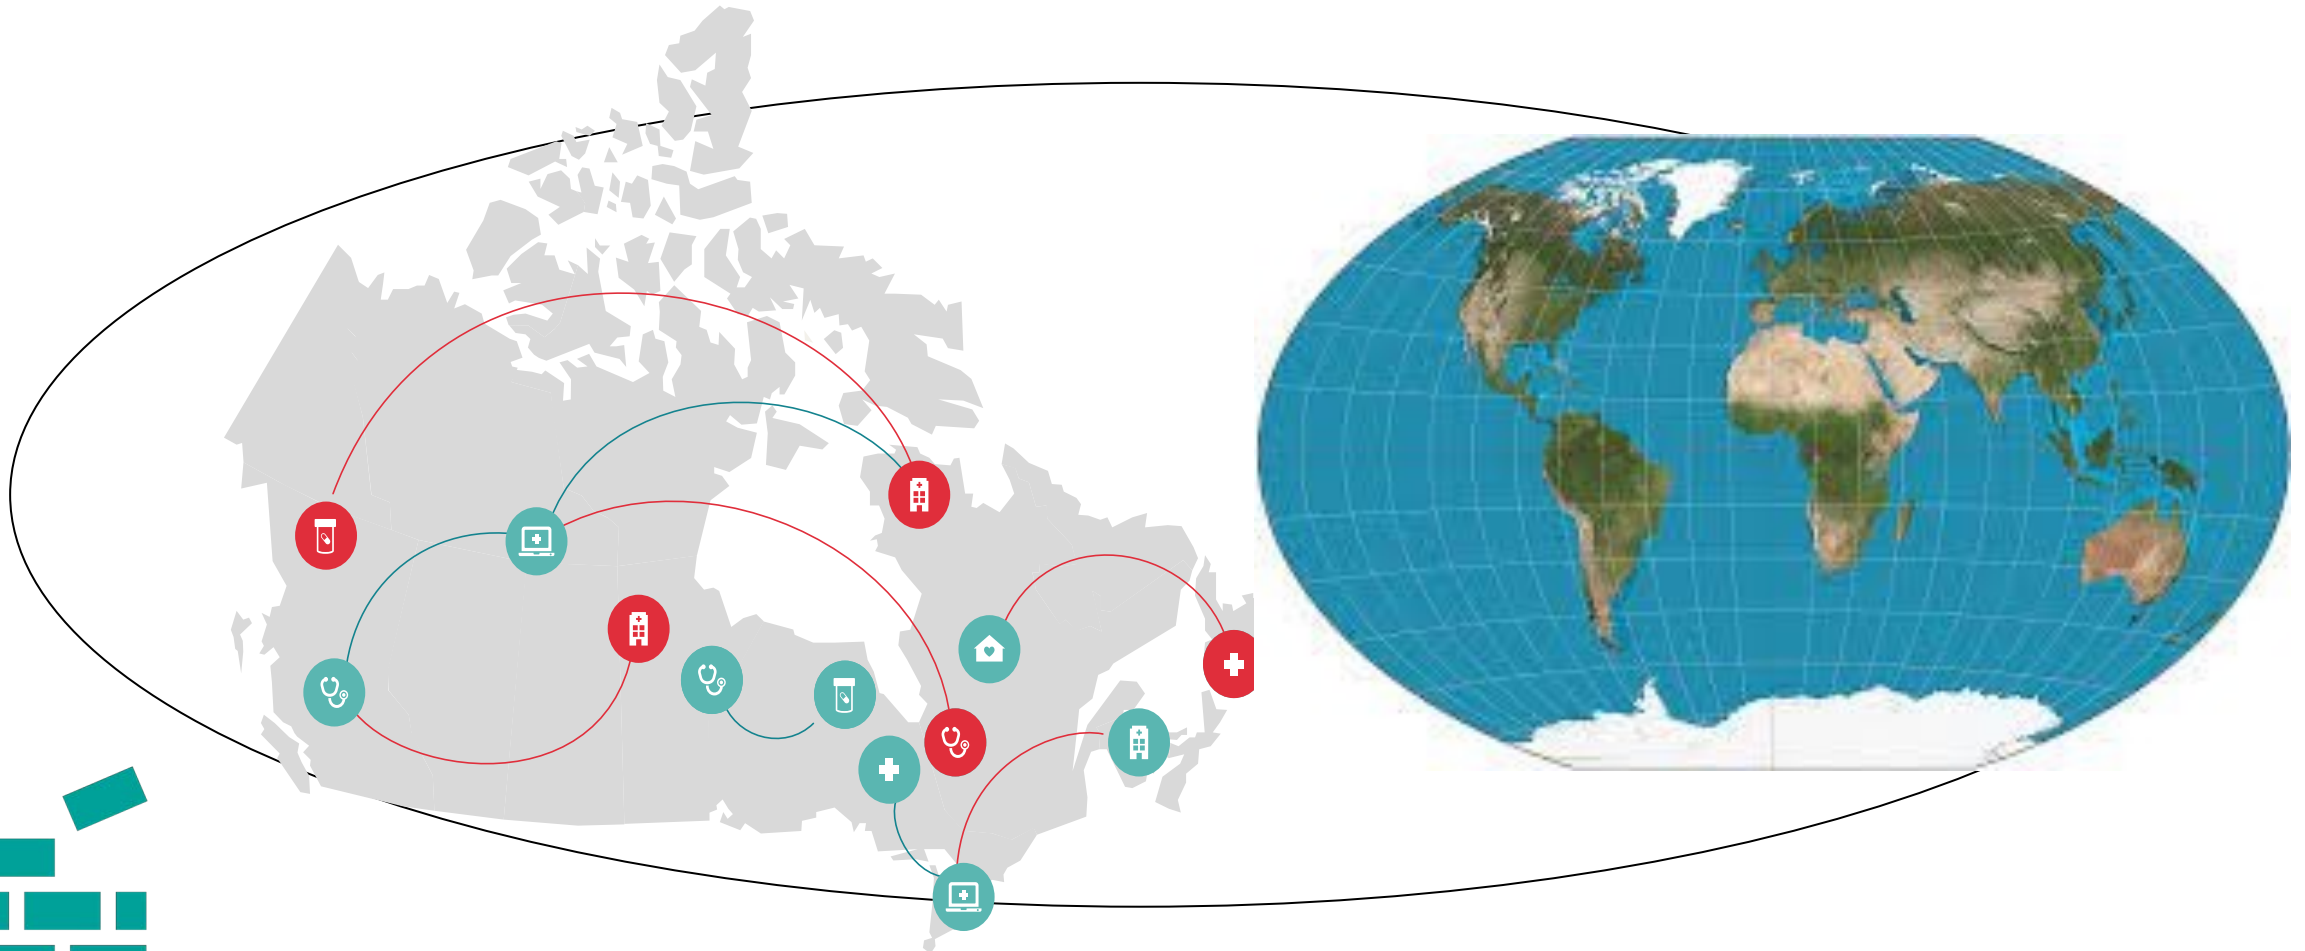

The health data content and data structure will be packaged into the pan-Canadian Health Data Content Framework which lays the foundation for interoperability among health care systems in Canada

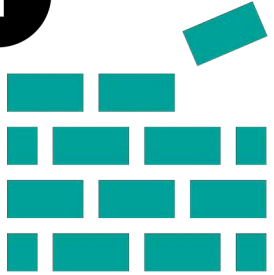

1

Defining the health data content and structure leverages lessons learned from international examples and builds on the progress made within Canada

1

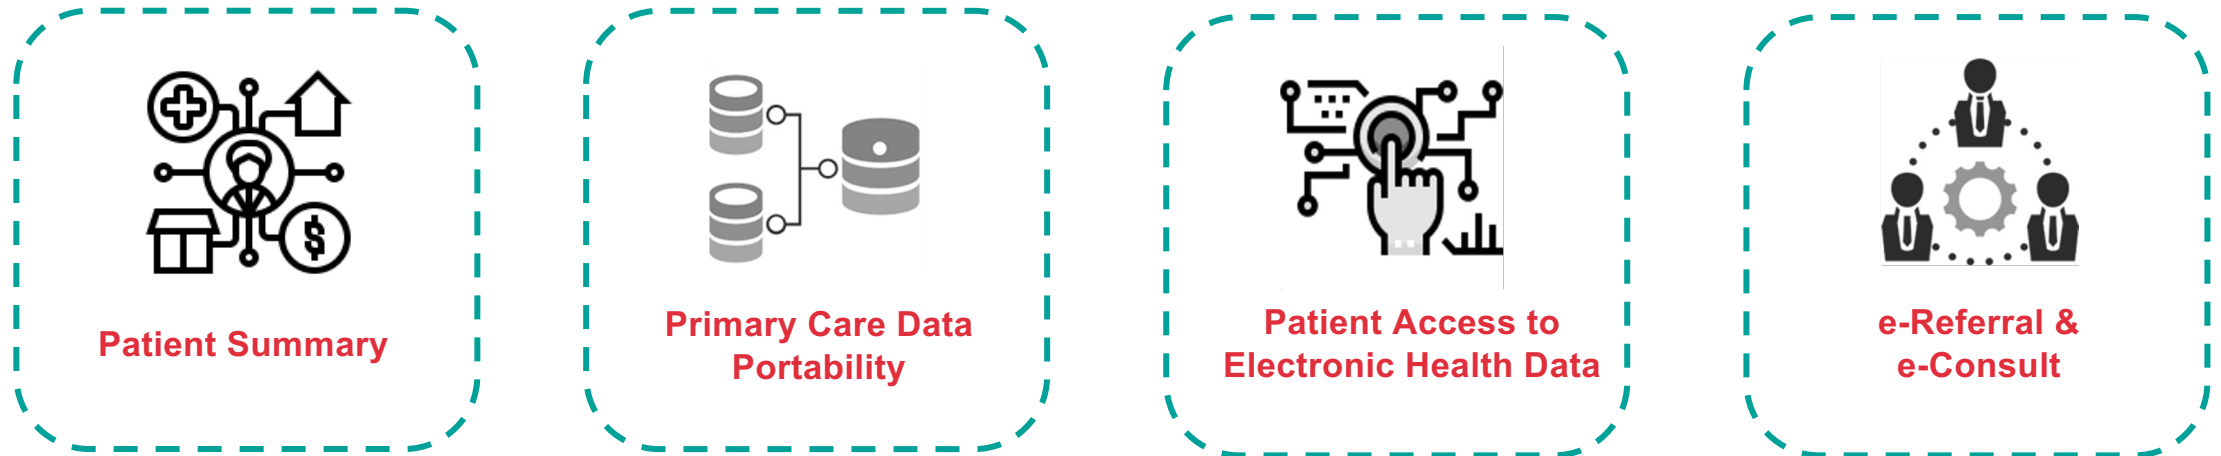

The Shared pan-Canadian Interoperability Roadmap will deliver...

Four Strategic Goals over five years

Supported in the near term through targeted initiatives

2. Converge to pan-Canadian standards aligned to global trends

3. Mobilize the market

We're Better Together

Collaboration from stakeholders spanning the healthcare system is necessary for Interoperability advancement and adoption

Connected care will modernize our healthcare system towards a sustainable future that puts the patient at the center of care and enables the quintuple aim

Infoway's 2023 Partnership Conference

November 14-15 in Vancouver, B.C.

Registration is now open

www.infoway-inforoute.ca/en/about-us/partnership-conference/registration

The 2023 Infoway Partnership Conference will showcase the latest discussions about interoperability, standards, digital health innovation and Indigenous care. The conference will also feature news and updates from Infoway's program areas.

We look forward to connecting with you Nov. 14-15 in Vancouver!
